GET WISE

About Your Oral Health

Dentists are Disease Detectives

Your mouth performs daily activities including eating, drinking, talking and smiling. But did you know

that your mouth can also provide clues to other diseases? Dentists can act as disease detectives by examining your mouth, head and neck for signs and symptoms that may point to more serious health issues.

During routine checkups, dentists look for cavities and gum disease, but also monitor symptoms like breath odor, unexplained sores and tooth erosion. If certain signs are detected, dentists can urge patients to seek medical attention. Dentists are at the forefront of saving lives, as more than 90 percent of common diseases have oral symptoms and can be detected in the dental chair.¹

It's important to remember that just because you haven't had a cavity or tooth pain recently, that doesn't necessarily mean you are in the clear. Visit your dentist regularly to ensure your oral health and overall health are in good standing.

Did you know?

More than 120 signs and symptoms of nondental diseases can be detected through a routine oral exam.²

Quick bites

Health problems with oral signs:3

- Anemia: Burning, fiery red tongue, swelling of the corners of mouth or pale gums.
- Anorexia nervosa and bulimia: Erosion of tooth enamel, fillings raised above the eroded tooth surfaces, sensitive teeth, enlarged parotid glands and sweetbreath aroma.
- Deficient immune system (HIV positive): Thrush mouth, unexplained sores, nonremovable white areas on the sides of the tonque.
- Diabetes: Dry mouth, distinctive breath odor, burning tongue, high rate of tooth decay, inflammation and infections in the mouth.
- Heart disease: Pain radiating to the jaw.
- Kidney failure: Delayed tooth development in children, dry mouth, odor, metallic taste and ulcers on the tongue and gums.
